File: emacs,   Node: *Mac Functions*

F.6 Mac-Specific Lisp Functions

The function `do-applescript' takes a string argument, executes it as
an AppleScript command, and returns the result as a string.

--:%%- *info* (emacs) **Mac Functions**   Top L1   [[[(Info Narrow)]]]--------------------

Click <mouse-2> on a completion to select it.
In this buffer, type RET to select the completion near point.
